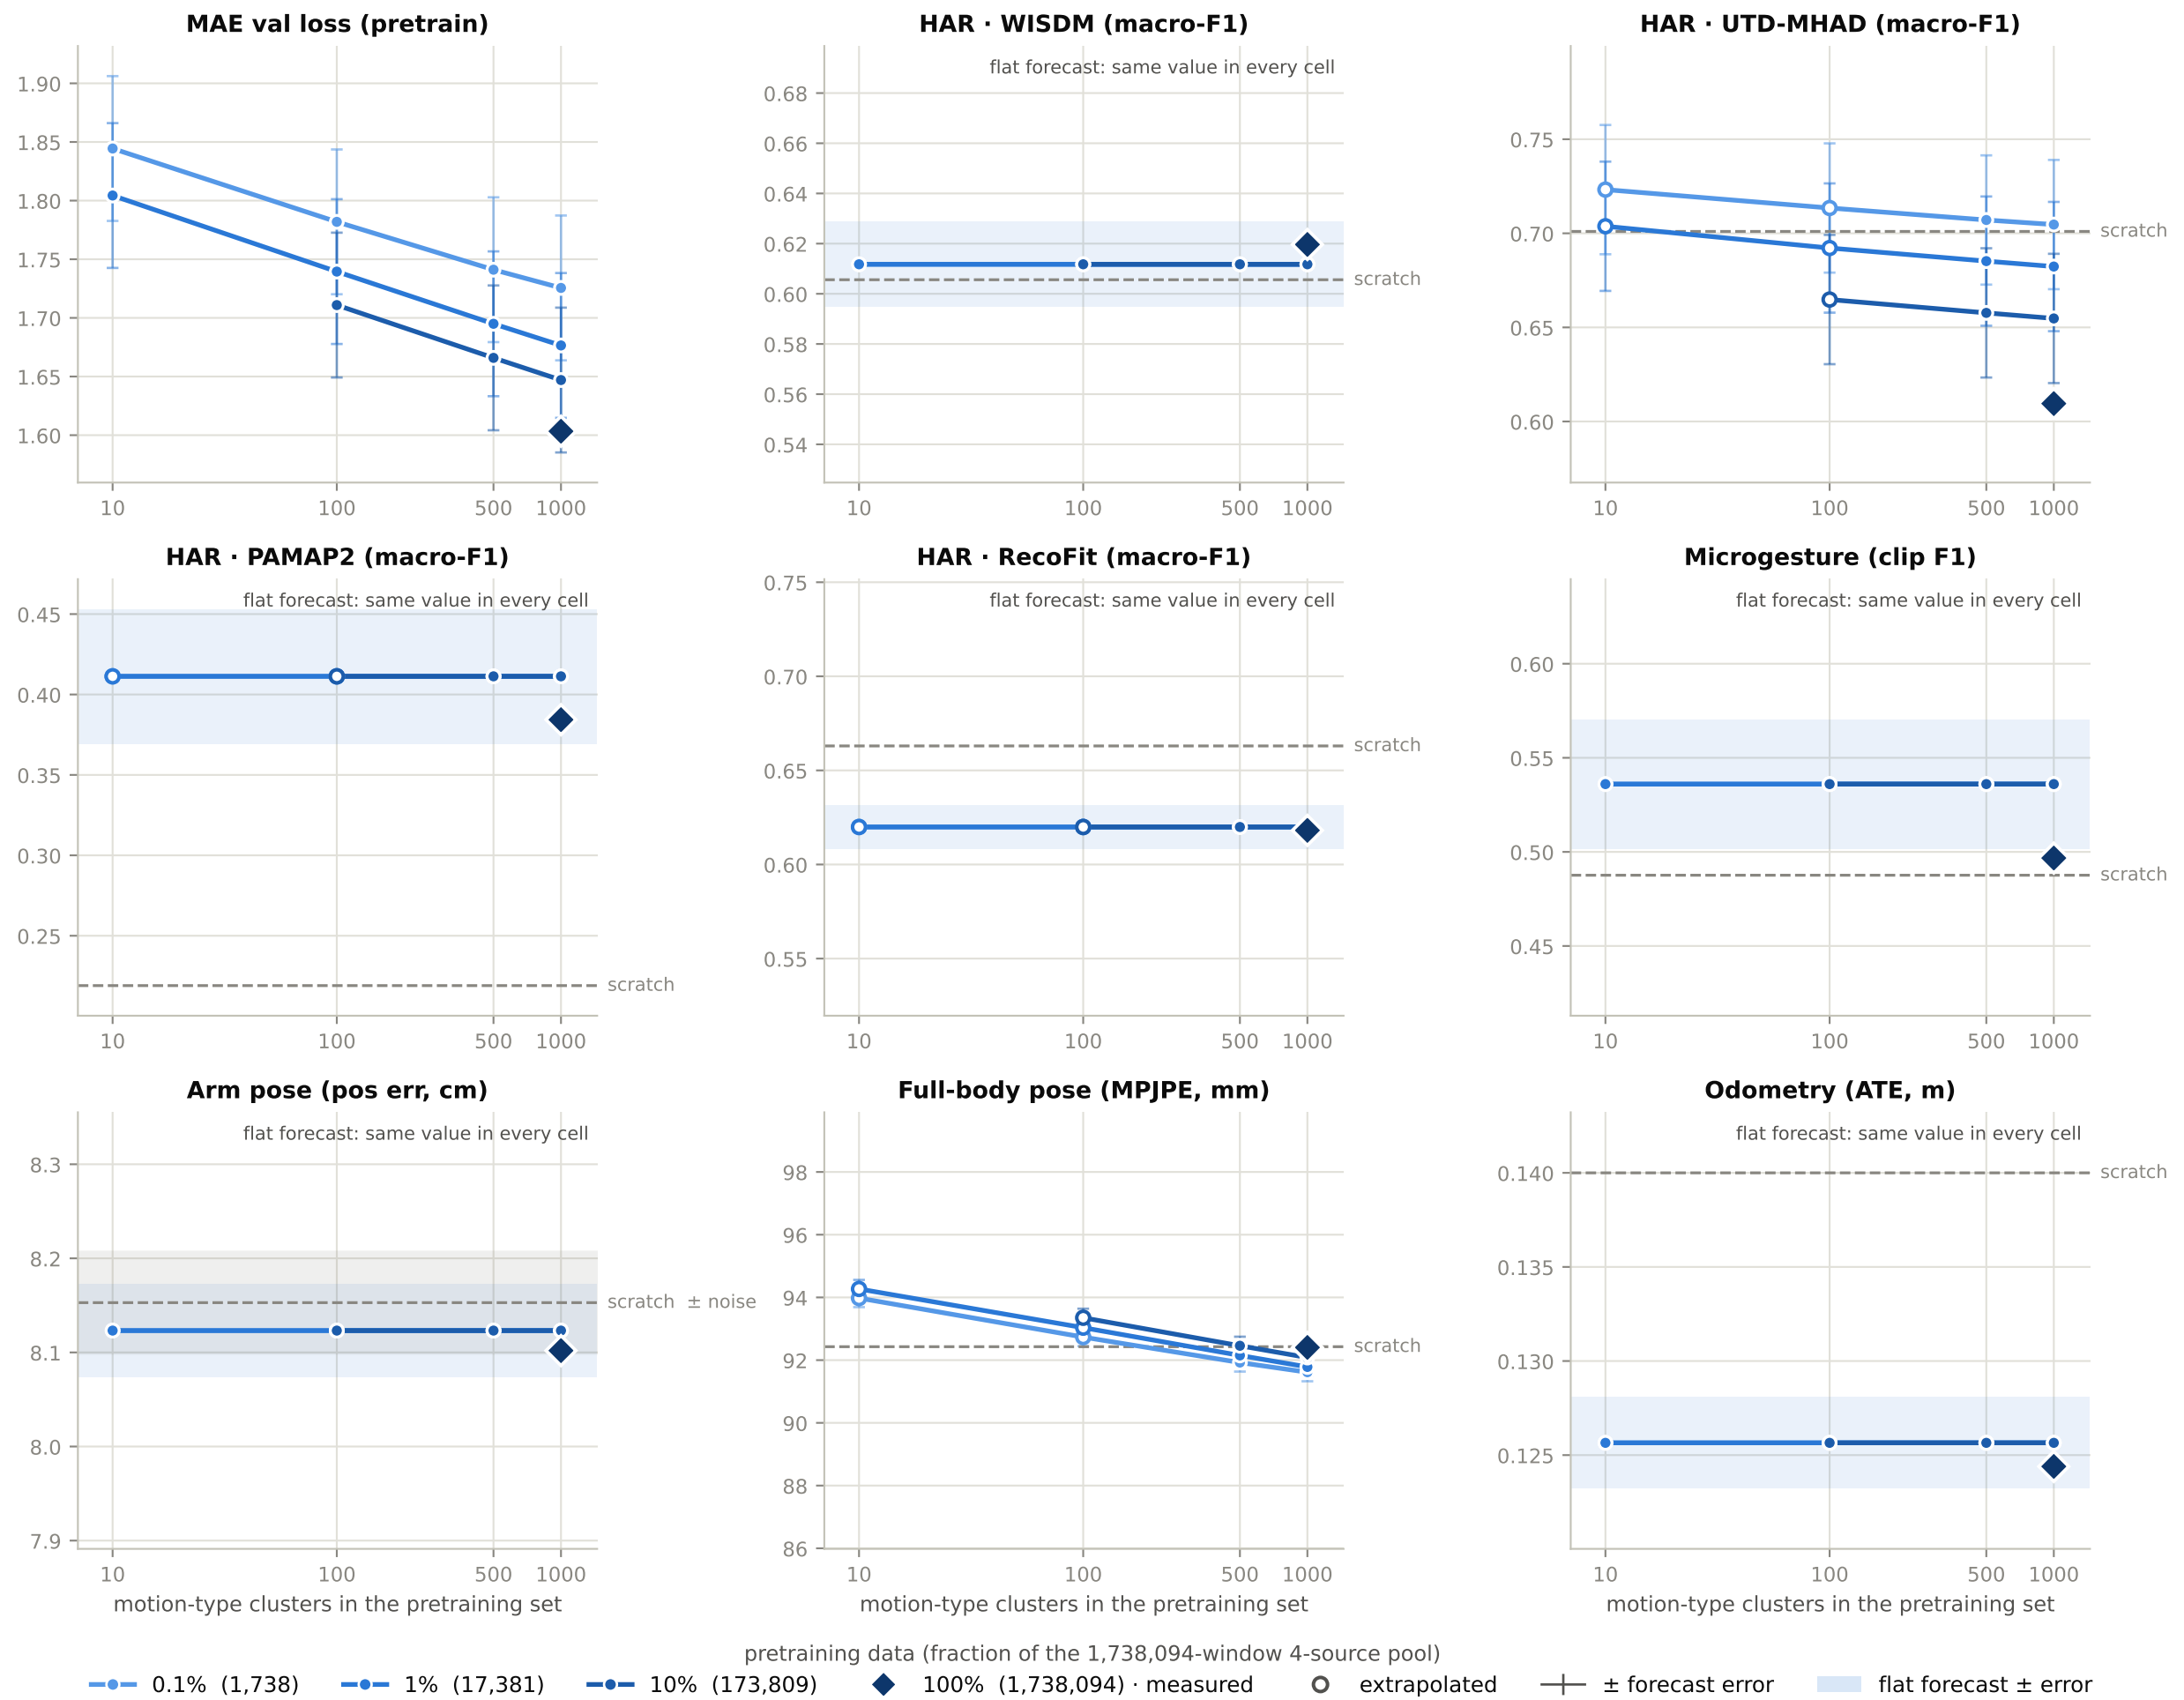
Forecast: performance vs number of motion types, at four data volumes


Not yet run. Leak-free 4-source pool, 12 realisable cells, equal 50K-step budget. Motion types are random, source-stratified clusters of a K=1000 partition of 40 physical features (realised effective types 8.6 / 83 / 415 / 808 at 1% data). Forecast fitted on 58 completed arms.
