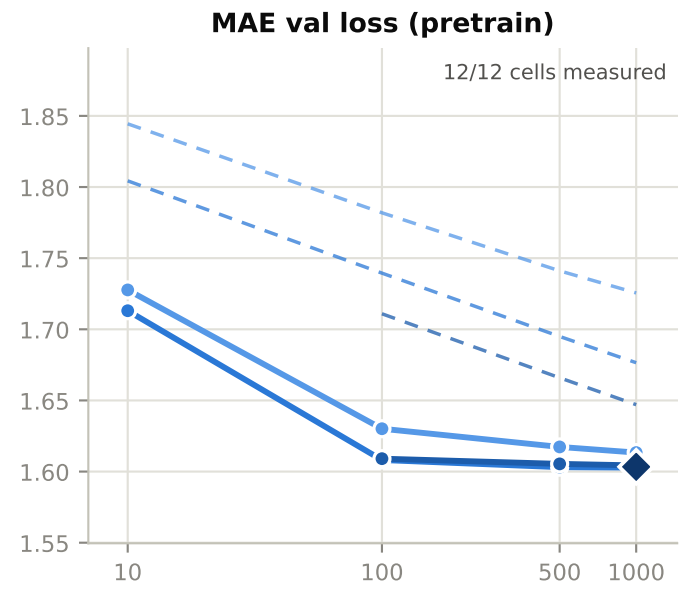
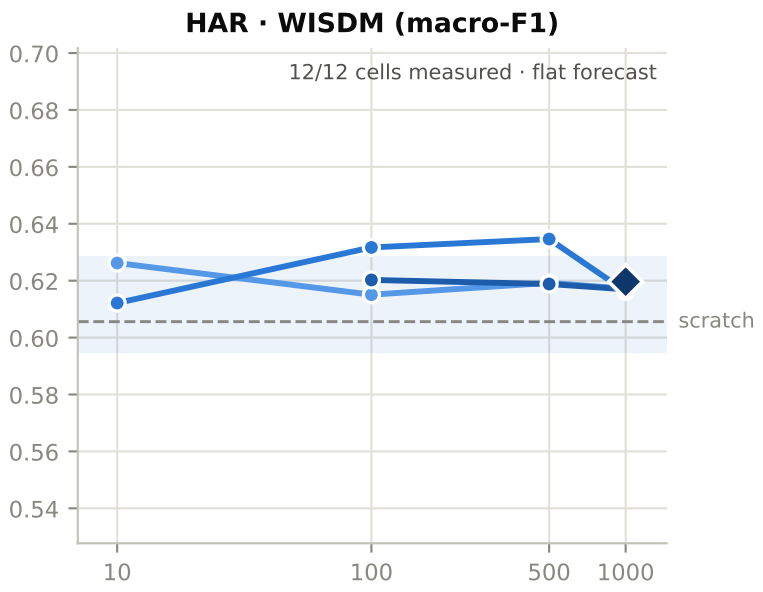
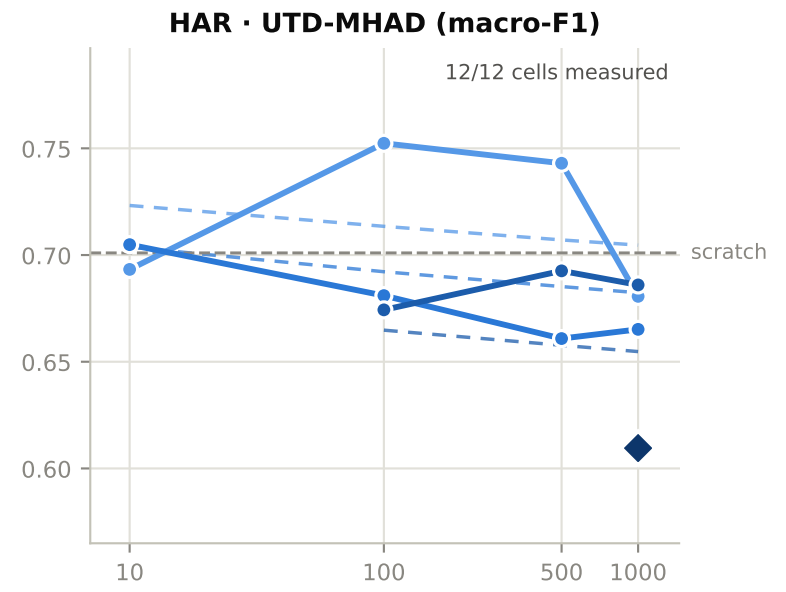
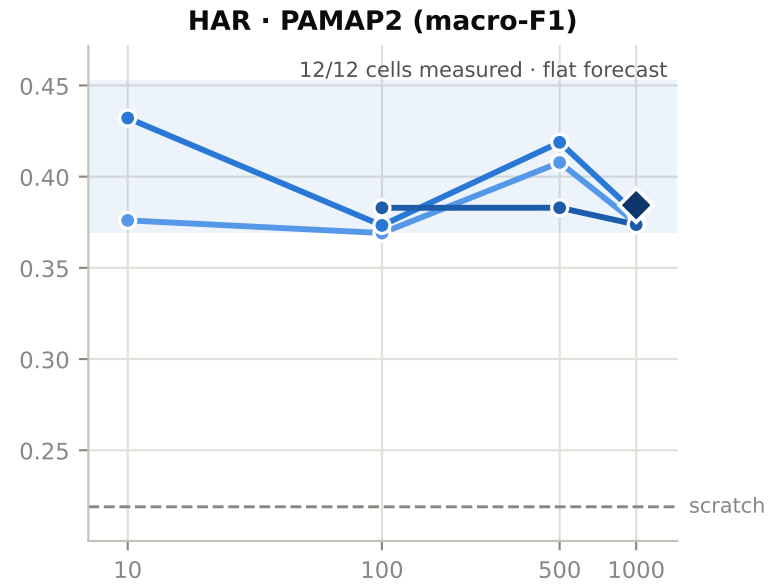
Measured vs forecast: performance vs number of motion types, at four data volumes

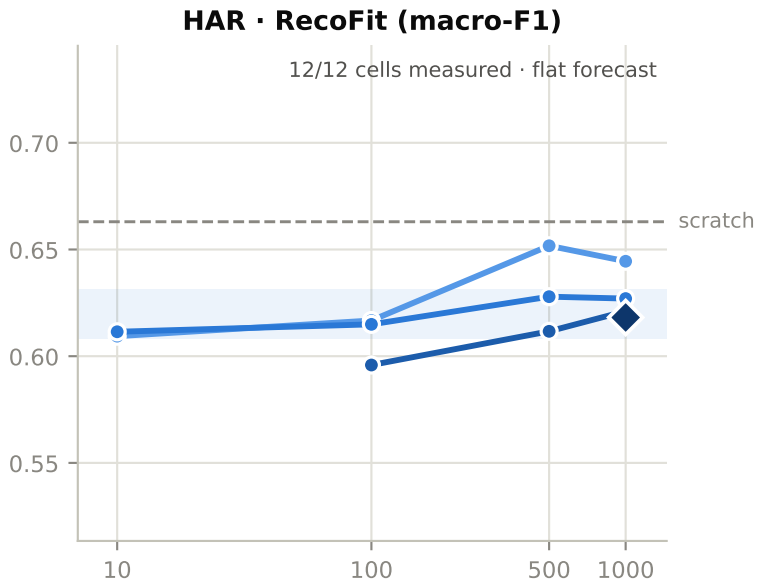
Random, source-stratified physical-type clusters (gyro-unit fixed), 50K-step budget, seed 42. All 96 probe cells scored. Dashed lines are the forecast written before any cell was trained.

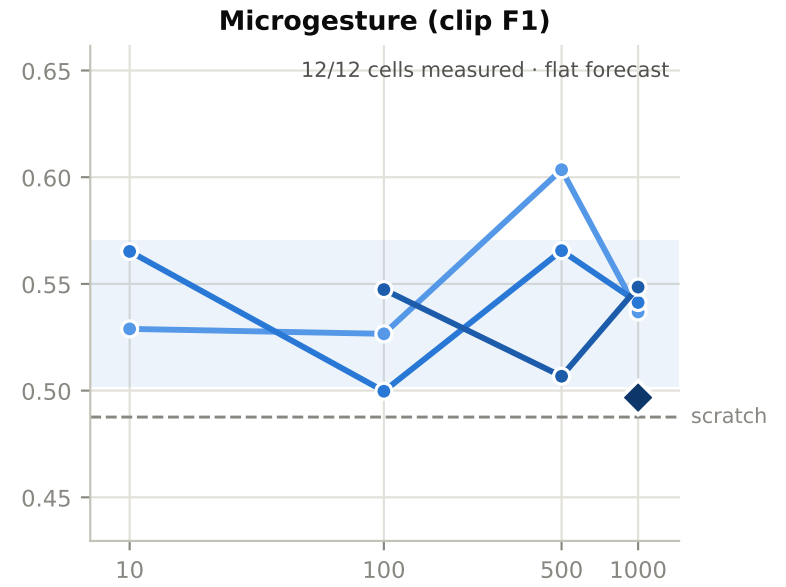


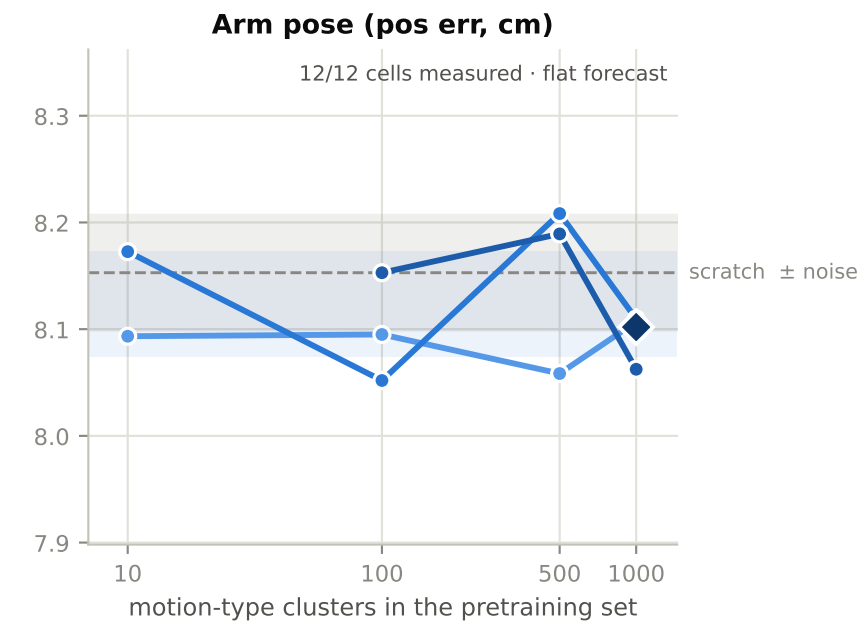


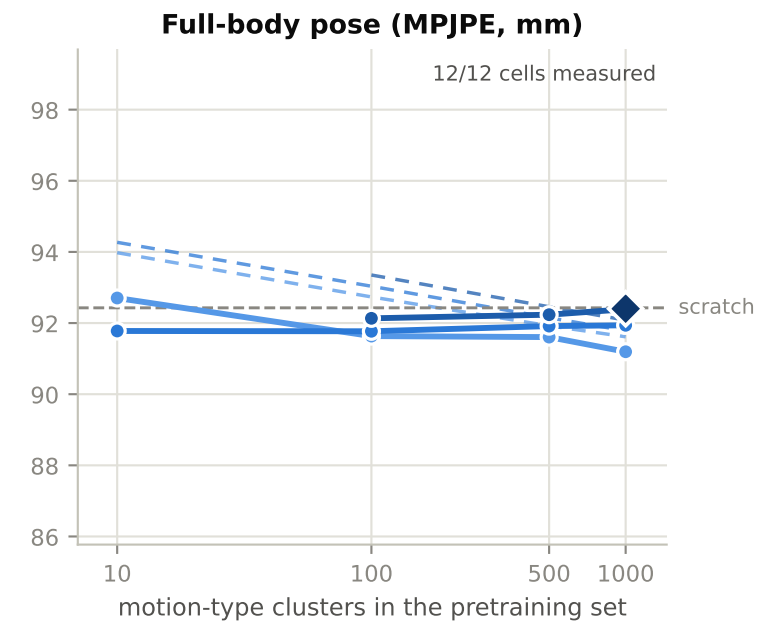


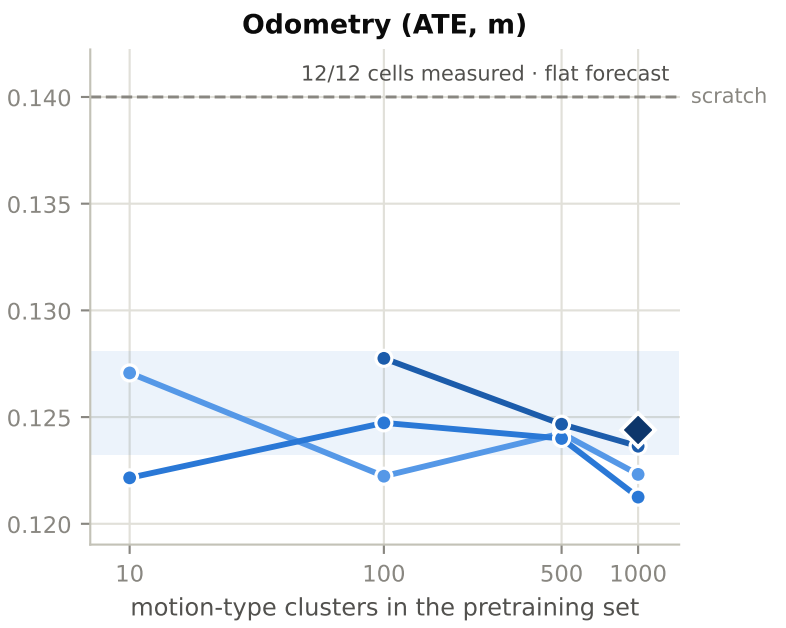












solid = measured · pretraining data (fraction of the 1,738,094-window 4-source pool)

0.1% (1,738) · 1% (17,381) · 10% (173,809) · 100% (1,738,094) · forecast (dashed) · flat forecast ± error
